- Suitable for beds of poultry, cows, horses, oxen, etc.
- Hydroseeding and gardening.
- It is recommended to keep stored under cover and protected from humidity for a period not exceeding 2 years.

We guarantee product quality and delivery service throughout the whole year.

Product of MOLIFIBRA specially intended for use as litter in cattle and horse farms, thanks to its high water retention capacity (CRA).

CRA is the ability of a material to absorb water from feces and urine, preventing soiling of the legs and lower areas of animals. This improves hygiene and animal comfort. MOLIFIBRA develops litters that, in addition to having a very high CRA, reduce the formation of ammonia (NH₃) from Urea and / or uric acid from feces and urine, thus significantly improving the health of animals and farmers, collaborating in the objective of environmental eco-sustainability.

We guarantee the stability and supply of the product throughout the year.
